Denon Advanced Quality Engineering

New Denon Advanced Evolution stereo duo designed for musical expression

August 2009 – Denon, one of the world's leading manufacturers of high-quality home entertainment products, has introduced the latest models within its award-winning Advanced Evolution Stereo series. The new mid-range PMA-710AE integrated amplifier and DCD-710AE compact disc player have been designed for pure high quality audio playback and amplification. Both models benefit from an extensive European sound tuning and feature respected, as well as brand new, Denon-unique technologies for the maximum audio experience in their class and beyond.

The PMA-710AE integrated stereo amplifier is equipped with a HC (High-Current) Single Push-Pull Circuit that delivers delicate musical details, which are backed up by plenty of power. Faithful reproduction of the original recording is also made possible by a circuit board layout that can handle greater power from the amplifier section and appropriately respond to the output level and unique character of the signal. In addition, the internal construction of the PMA-710AE has been carefully designed to prevent unwanted vibration adversely affecting the audio signal.

The DCD-710AE CD player incorporate a host of proprietary Denon audio technology to give you a quality of sound you would normally expect only from higher priced models. It also has a USB port for digital input from an iPod or USB memory stick. The DCD-710AE's exceptional sound quality is produced by a combination of Denon's AL24 Processing analogue waveform recreation technology, highly accurate D/A converters, and DAC master clock design.

The new Stereo duo again shows the engineers' dedication to musical fidelity for which DENON is renowned since nearly 100 years.

The PMA-710AE and DCD-710AE are available now in premium silver and black colour at a suggested retail price of £349.99 for each component.
