PRESS RELEASE

OmniMount Systems Ultra Low Profile Cantilever Series

New cantilever mounts provide greater versatility of full motion mount yet still maintain compact, discreet design

OmniMount, a leading manufacturer of consumer and commercial A/V mounting solutions, has introduced four cantilever mounts to its Ultra Low Profile Series.

Today, more and more flat panel manufacturers are striving to achieve the thinnest possible displays. OmniMount's Ultra Low Profile Series is the perfect full-functionality accessory for these televisions by providing similar on-wall discretion so that the TV and mount blend together seamlessly into any viewing environment. The new cantilever option provides additional functionality as its arms extend away from the wall and allows the user to tilt, pan and swivel the flat panel to optimize viewing from any seat or for multiple viewing areas.

The Ultra Low Profile Series collectively provides a size, price point and application to satisfy the demands of any consumer. The new cantilever solutions support flat panels from 13 to 75 inches, and all the way up to 114kgs or 18 stone!

Offering a sleek and slim design without compromising functionality, the cantilever models feature a steel tube double arm construction for maximum strength and durability. Each of OmniMount's low profile mounts are made from heavy-grade steel, have a durable black powder coat finish and include extruded aluminium end caps that present a clean side view. The series also includes all the features installers are accustomed to from OmniMount: 'Lift n' Lock™ for easy installation, locking system for added safety and security, sliding lateral on-wall adjustment, universal rails for maximum flat panel compatibility, open architecture for simplified wiring and an easy-to-use installation template.

To make mounting and wiring flat panels even easier, the cantilever arm was designed with integrated cable management. All the wires can be neatly fed through the arm, keeping wires out of sight and also protecting them when the cantilever is moved into its multiple viewing angles.

Key Features of Ultra Low Profile Series Cantilever Mounts:

February 2010

PRESS RELEASE

- Cantilever arms nest completely for a discreet mounting profile
- Tilt, pan and swivel for maximum viewing flexibility
- Steel tube double-arm construction for maximum strength and durability
