

## METALLICA MAN'S SIGNATURE AMP PERFECT FOR WHEREVER YOU MAY ROAM

*The Kirk Hammett Signature Series is the first range of guitar amps to bear the name of Metallica's axe master, making the Randall KH15 one of the world's ultimate practice amps*

For over 24 years Kirk Hammett has been an integral member of multi-selling band Metallica. Now, for the first time, the world-leading guitarist has endorsed a range of guitar amps. Randall's new Kirk Hammett Signature Series brings the main-man's classic tube-based sound to the adoring masses, and – be it for use in the backstage or in the back bedroom – the new Randall KH15 is the ideal practice amp.

This 15 watt combo features the range's all-tube preamp, plus there's a 3-band EQ, and a phone jack. There is even a CD/tape input, letting you thrash along to your favourite tunes. The unit pumps music through a 6.5in Randall Jaguar driver, the hard-wearing cabinet looks beautifully retro and – as it's his design! – Kirk's signature runs across the case. So, if you're looking for an amp with which to refine your licks, what better than a combo designed by the first inductee into *Guitar World's* Hall of Fame, and *Rolling Stone's* 11<sup>th</sup> Greatest Guitarist of All Time?

Discussing the Randall project Kirk said, "This is the first time I've really done any kind of amp endorsement. I knew that there's a lot of work that goes into it, and I'm really picky anyway. But things have turned out great. This is one amazing amp."

Hammett's new signature amp series was designed and tuned to Kirk's exacting specification. For those looking to up the ante from practice to power play, the new line's KH120R delivers a meaty 120 watts from its half-stack package. A half-stack, of course, for those looking to get all technical on our asses, translates to, er, bigger sound and even more 'proper' looks!

The Kirk Hammett Signature Series is exclusively distributed by Sound Technology, and is on sale now.

- The KH15 is £59 RRP inc. VAT.
- The KH120 is £549 RRP inc. VAT.
